MEMS 3000 ALCOHOL MONITORING

SUPERIOR
LAW ENFORCEMENT
TECHNOLOGIES

Alcohol Monitoring & Home Detention System

The MEMS 3000 is a highly efficient monitoring unit, integrating accurate breath alcohol testing (BAT), video identity verification and radio frequency (RF) presence monitoring into a single home unit. MEMS 3000 allows community supervision agencies to monitor offenders' breath alcohol levels remotely, as an independent measure, or in combination with a restrictive home detention schedule.

MEMS 3000 Features

- Highly accurate electro-chemical breath-alcohol tester
- New color picture for clearer identity verification
- Scheduled, random or on-demand tests with automatic re-testing
- Integrated RF home detention monitoring
- Efficient reporting to remote locations via e-mail, fax, SMS or pager
- Secure data management via internet access
- Shorter test procedure, efficient communication
- Cost effective and simple to use
- Easy to understand for program participants
